

- Saves storage management time and costs
- Reduces system downtime and out-of-disk-space errors
- Provides flexibility to juggle disk space when free space is tight
- Supports all disk types, such as SAN, JBOD, RAID, and EMC
- Provides an easy GUI with powerful file filtering, logging, and scheduling
- Provides “set and forget” online archiving for stress-free administration
- Allows tradeoff between compression ratio and speed

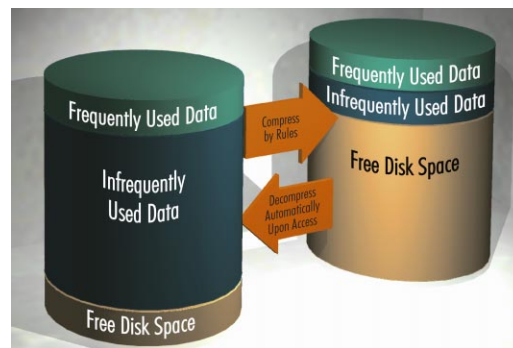

Solution-Soft™

We Make e Better™

Surviving the Data Explosion

Web-based e-commerce, global information sharing, data warehousing, document imaging, video on demand, and other technologies are pushing traditional storage technologies to the limit. Data storage needs are growing at an unprecedented rate—

e-Space saves disk space and management costs with transparent and automatic online archiving.

consuming system-administration budgets and forcing IT departments to manage more and more storage hardware. Corporations are being forced to re-evaluate their storage budgets and IT infrastructure.

While the price-per-megabyte of disk space continues to drop, the total costs of ownership are increasing at a much faster rate. For every

dollar spent on storage hardware, 5 to 7 dollars are spent annually to manage it! The phenomenon of “putting everything on the net,” where e-data must be available online, further accelerates the data explosion.

Archiving Online

The e-Space Software Solution helps you overcome this storage crisis through patent-pending technology that enables online archiving, which is transparent to the user and the applications. It uses policy-based compression to allow more data files to be stored online. Compressed files retain the same names and attributes to let users find and access the data easy and fast. Upon access, the files are automatically decompressed.

Because e-Space is implemented as a Windows NT/2000 service, it simplifies administration and automation of archiving functions. You can install e-Space and immediately start using the default policy. Or, using the easy graphical user interface, you can re-set the storage policy in seconds by specifying the filing characteristics – such as file extension, size, name, last-modified date, last-access date, or minimum compression percent. Then forget about it. The e-Space Solution dynamically compresses the data according to the pre-set policy.

The e-Space Solution decreases time and costs to store and manage your data on Windows NT/2000-based systems. It drastically increases available storage capacity and enables you to meet the exploding demand for online data.

Scalability

The e-Space Solution increases the data-storage capacity of your hardware and the network bandwidth throughput by achieving an average compression ratio of 70%. You can obtain additional online storage, as you need it, by changing the archiving policy. Then as your data storage needs grow and you add more storage media, e-Space continues to let you squeeze more data storage capacity from your hardware. Your IT department can continue leveraging the original investment in e-Space, remain under budget, and stay ahead of the data explosion

Availability

With your IT department shooting for the “three nines” of network uptime (99.9%), you have no room for unplanned storage-related downtime. The e-Space Solution stores data online, so more is available 24 by 7 for e-business, regulatory compliance, customer service, and historical analysis.

Performance

Files are automatically archived online through rapid block-level compression. The files are compressed and decompressed on the fly during read/write functions and recompressed when files are closed.

Reliability

In the Windows NT/2000 environment, e-Space uses the native compression algorithms to provide risk-free online archiving. The e-Space Solution reduces system downtime, since less storage hardware is required and out-of-disk-space crashes are reduced.

e-Space Software can easily save millions of dollars over conventional hardware storage solutions.

Manageability

The e-Space Solution is simple to install and use. The unique “set and forget” approach lets you configure your policy once and then forget about it! The automatic and transparent archiving runs by itself. The e-Space Solution decreases IT spending by reducing the system administration of storage management and increases IT productivity by allowing employees to focus on other tasks. Plus, e-Space has an easy-to-use GUI with powerful file filtering, logging, and scheduling.

Interoperability

Interoperability and compatibility in heterogeneous environments are key to successful enterprise-wide storage management. The e-Space Solutions support major UNIX platforms, including HP, HP-UX, IBM AIX, Linux, Sun Solaris, as well as HP MPE and Microsoft Windows NT/2000. It is compatible with all data storage products, including SAN, JBOD, RAID, EMC and backup technologies.

Ordering information

For more information or to order a free demonstration copy, please call our sales office at: (888) 884-7337 or (408) 346-1400. Visit our web site at: www.solution-soft.com.
